

TOOLS

Applied Ecosystem										Jupyter Notebooks									
Simulation & Modeling										EDA & Structural Analysis									
CAD & Design										Infrastructure Design									
Quantum Chemistry										Chemistry Tools									
Computational Chemistry										Molecular Visualization									
Language-Specific Tools										Statistical Platforms									
Python Tools																			
Machine Learning Frameworks										Scientific Computing									
Specialized ML Tools										Data Visualization									
Numerical & Mathematics										JavaScript ML									
Programming Languages										Business Analytics									
Big Data & Distributed Computing																			
Location & Mapping Platforms										GIS Platforms									
Web Mapping Libraries										3D & Advanced Visualization									
Geospatial Data & Tools										Earth Observation									
Orbital & Electronic Structure										Educational & Reference									
Nuclear & Particle Physics										Molecular Dynamics									
NASA Platforms & Programs										Proposal & Observation Planning									
Data & Modeling Centers										Space Science References									
Jupyter Tools																			
Neuroimaging Platforms										Brain-Computer Interface									
Comprehensive Platforms										Reference & Resources									
Data Catalogs & APIs										Databases									
Visualization & Algorithm Tools																			
Architectures & Deployment										Build Tools									

LANGUAGES & FRAMEWORKS

Python										Jupyter									
Architecture & Deployment										Build Tools									
Data Science & Analytics										Visualization & Reporting									
Machine Learning & AI										Web Development									
Cloud & DevOps										Mobile Development									
Security & Privacy										Testing & QA									
Networking & Infrastructure										Documentation & Training									

The diagram illustrates the Cloud Native Computing Foundation (CNCF) landscape, organized into a grid of categories and cloud providers. The categories are listed on the left, and the cloud providers are listed at the top. Each cell contains a logo for a specific project or service, often with a 'GRADUATED' label.

Categories (Rows):

- Framework & Runtime:** Includes projects like Spring, Quarkus, and others.
- Web Servers & Hosting:** Includes projects like Nginx, Apache, and others.
- Web Frameworks:** Includes projects like Django, Flask, and others.
- Package Management:** Includes projects like npm, Maven, and others.
- Web & Async Frameworks:** Includes projects like Node.js, Go, and others.
- Language & Toolchain:** Includes projects like Rust, C++, and others.
- Build Generators:** Includes projects like Jenkins, Gradle, and others.
- Build System:** Includes projects like Maven, Gradle, and others.
- Tools & Middleware:** Includes projects like Prometheus, Grafana, and others.
- Simulation & Modeling:** Includes projects like Simulink, and others.
- Cost Framework:** Includes projects like KubeCost, and others.
- Language & Development:** Includes projects like Java, Python, and others.
- Simulators & Hardware Providers:** Includes projects like AWS IoT, and others.
- Scientific Computing:** Includes projects like Jupyter, and others.
- Language & Runtime:** Includes projects like Python, Java, and others.
- Machine Learning & Data Science:** Includes projects like TensorFlow, and others.
- Package Management:** Includes projects like npm, Maven, and others.
- Visualization:** Includes projects like Grafana, and others.

Cloud Providers (Columns):

- AWS
- Azure
- Google Cloud
- IBM
- Oracle
- SAP
- VMware
- Microsoft
- Red Hat
- OpenStack
- Kubernetes

The diagram shows the progression of projects from incubation to graduation across different cloud environments. Projects are often labeled 'GRADUATED' when they have reached a mature stage.

Microsoft Azure	Compute Services										AI/ML Applications									
	Storage Services										Data Integration & Migration									
	Networking & Content Delivery										Storage Services									
Google Cloud Platform	Compute Services										Analytics Services									
	AI/ML Services										Azure Applications									
	Database Services										Data Integration & Migration									
Amazon AWS	Compute Services										Storage Services									
	Networking & Content Delivery										IOP Applications									
	Analytics Services										Storage Services									
Oracle Cloud Infrastructure	Compute Services										Data Integration & Migration									
	IOP Applications										Networking & Content Delivery									
	Compute Services										Analytics Services									
IBM Cloud	Storage Services										AI/ML Services									
	Database Services										Data Integration & Migration									
	IBM Applications										Analytics Services									
Salesforce	Compute Services										AI/ML Services									
	Database Services										Networking & Content Delivery									
	Storage Services										Data Integration & Migration									
Broadcom	Infrastructure Software										Data & Analytics									
	Broadcom Applications										Application Development									
	Security & Compliance										Integration & Middleware									
Cross-Cloud Services	Management & Operations																			
	Satellite & Edge Computing										Multi-Cloud Analytics									
	Multi-Cloud Networking										Integration & DevOps									
	Multi-Cloud Security
